Note

1. "N/A" means not available.
2. Detection area is affected on volume of motion object and motion speed. The detection area is tested by a 165cm height person and walking speed is 0.5m/s.

3. Function

1) ON/OFF Function (stand-by period set at '0')

- 1 With sufficient ambient light, the light will not be switched on even if with motion signal.

- 2 With insufficient ambient light, the sensor switches on the light when motion is detected.

- 3 After elapse of hold time, the sensor switches off the light when no motion is detected.

2) 2-step dimming function (stand-by period set at "+∞")

- 1 If there is no motion detected, the light will be remained at a low light level all the time.

- 2 When motion is detected, the sensor will switch on the light to 100% brightness

- 3 After elapse of hold time, the sensor dims the light at the present low light level if no motion is detected.

3) 3-step dimming function (stand-by period set at "5min" or "15min")

- 1 With sufficient ambient light, the light will not be switched on even if with motion signal.

- 2 With insufficient ambient light, the sensor switches on the light when motion is detected.

- 3 After elapse of hold time, the sensor dims the light at a low light level if no new motion is detected.

- 4 After elapse of standby period, the sensor switches off the light if no motion is detected in the detection zone.

5. Wiring

*The sensor is designed for connect one load only. Connect more than one loads may damage the sensor.

7. Radiation Pattern

Ceiling mounting

Ceiling mounted height: 3m
Sensitivity: 100%/75%/50%/25%

Normal moving (Speed: 1m/s)

Slow moving (Speed 0.3m/s)

Ceiling mounted height: 4m(*)
Sensitivity: 100%/75%

Normal moving (Speed: 1m/s)

Slow moving (Speed: 0.3m/s)

*Only 100% /75% detection sensitivity is workable when installed at 4m mounting height. 25%/50% sensitivity is not able to detect motion signal.

Wall mounting:

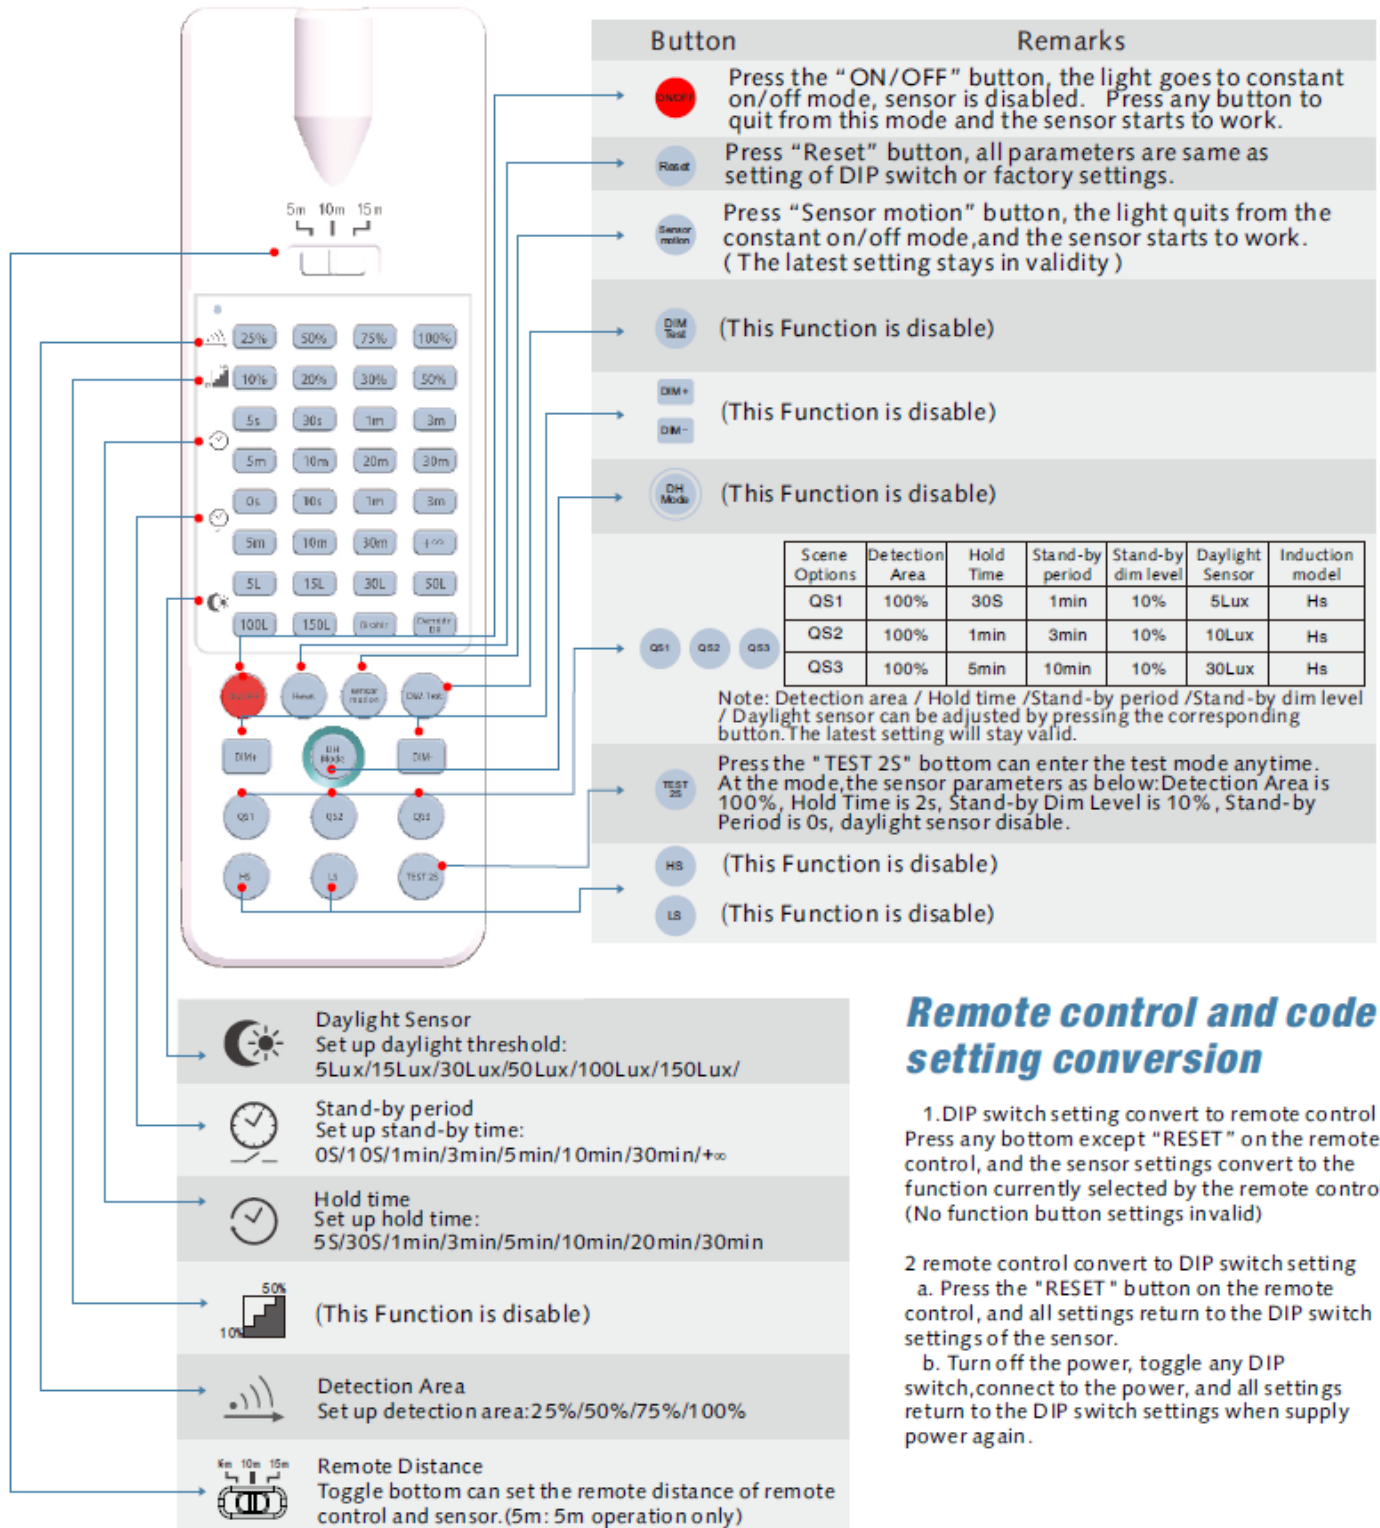

Horizon mounted height: 2m
Sensitivity: 100%/75%/50%/25%

Normal moving (Speed: 1m/s)

Slow moving (Speed 0.3m/s)

Remote control and code setting conversion

1. DIP switch setting convert to remote control
Press any bottom except "RESET" on the remote control, and the sensor settings convert to the function currently selected by the remote control. (No function button settings invalid)

2 remote control convert to DIP switch setting
a. Press the "RESET" button on the remote control, and all settings return to the DIP switch settings of the sensor.

b. Turn off the power, toggle any DIP switch, connect to the power, and all settings return to the DIP switch settings when supply power again.
